PROFESSIONAL SUMMARY

Product-focused Computer Science undergraduate bridging the gap between Technical Feasibility and User Experience. Experience shipping **3+ AI-driven products** (LLM Agents/RAG) and managing cross-functional teams to drive **40% YOY growth**. Passionate about leveraging GenAI to solve workflow friction and building scalable developer tools.

EXPERIENCE

E-Cell, IIIT Bhubaneswar

Head of Design Operations & Growth / Dec 2022 – Apr 2024

- Managed a cross-functional team (Design & Tech) to execute 30+ campaigns, driving a **40% YOY increase** in student engagement.
- Established a unified design system and agile sprint workflows, reducing creative asset turnaround time by **35%**.
- Utilized A/B testing on visual assets to optimize event funnel conversion, directly impacting footfall for flagship events.

Codsoft

Software Engineering Intern / May 2024 – Jun 2024

- Engineered modular internal utility tools using Python, focusing on code reusability and architecture scalability.
- Implemented CI/CD best practices to streamline deployment for three standalone applications.

TECHNICAL PRODUCT PROJECTS

NorthPole AI (Internal SaaS Tool)

Product Owner & Dev

- Problem:** Product Owners spend ~30% of sprint time manually translating stakeholder wishlists into technical tickets.
- Solution:** Built a B2B-style dashboard using **OpenAI API** that parses natural language into structured engineering tickets.
- Impact:** Automated complexity scoring and resource allocation, estimating a **20% reduction** in sprint planning overhead.

ChatPDF Pro (RAG Infrastructure)

Full Stack Developer

- Architecture:** Designed a scalable RAG pipeline using **LangChain** and **Pinecone** to process 300+ documents.
- Performance:** Optimized vector chunking strategies to achieve **<6s ingestion latency** and **~89% retrieval relevance** on a custom evaluation benchmark of 50 complex queries.

DevAssistant (Developer Productivity CLI)

Java, GenAI

- Impact:** Processed 150+ error logs, reducing debugging time by **40%** via automated root-cause analysis.
- Tech:** Built a CLI agent that parses Java stack traces and auto-generates **JUnit** tests to prevent regression.

INDEPENDENT PRODUCT RESEARCH

Snabbt Quick-Commerce Teardown

UX & Retention Analysis

- Deconstructed the user journey to identify friction points; analyzed “Dark Patterns” vs “Nudges” used to drive impulse retention.

UPI Incentives & Unit Economics

Strategic Market Analysis

- Analyzed the monetization pivot of Google Pay/PhonePe in a zero-MDR market, evaluating the shift from CAC-heavy cashback models to credit-line cross-selling.

Trust Calibration in AI

Heuristic Evaluation

- Proposed a framework to measure “Trust Calibration,” analyzing UI signals that lead to user over-trust (blind acceptance) in LLM outputs.

SKILLS

Product Strategy

Roadmapping, OKRs, RICE Prioritization, A/B Testing, User Story Mapping, KPI Tracking

Data & Tools

SQL, Mixpanel, Amplitude, GA4, Figma, Jira, Linear, n8n

Tech Stack

Python, Java, RAG Pipelines, Vector Databases (Pinecone), LLM Agents, Git, CI/CD

EDUCATION

International Institute of Information Technology, Bhubaneswar

2022 – Present

Bachelor of Technology – Computer Science & Engineering

CERTIFICATIONS & VIRTUAL EXPERIENCE

- Google & Kaggle AI Agents Intensive** – Built autonomous AI agents using advanced reasoning loops.
- Electronic Arts (EA) PM Simulation** – Improved retention forecast by **15%** via feature prioritization & roadmap sequencing.
